User Guide: RT Climatometer Platform

This guide summarizes the key features of the application for smooth navigation and optimal use of geographic and meteorological data.

1. Access and Authentication

The platform has a secure system for user management.

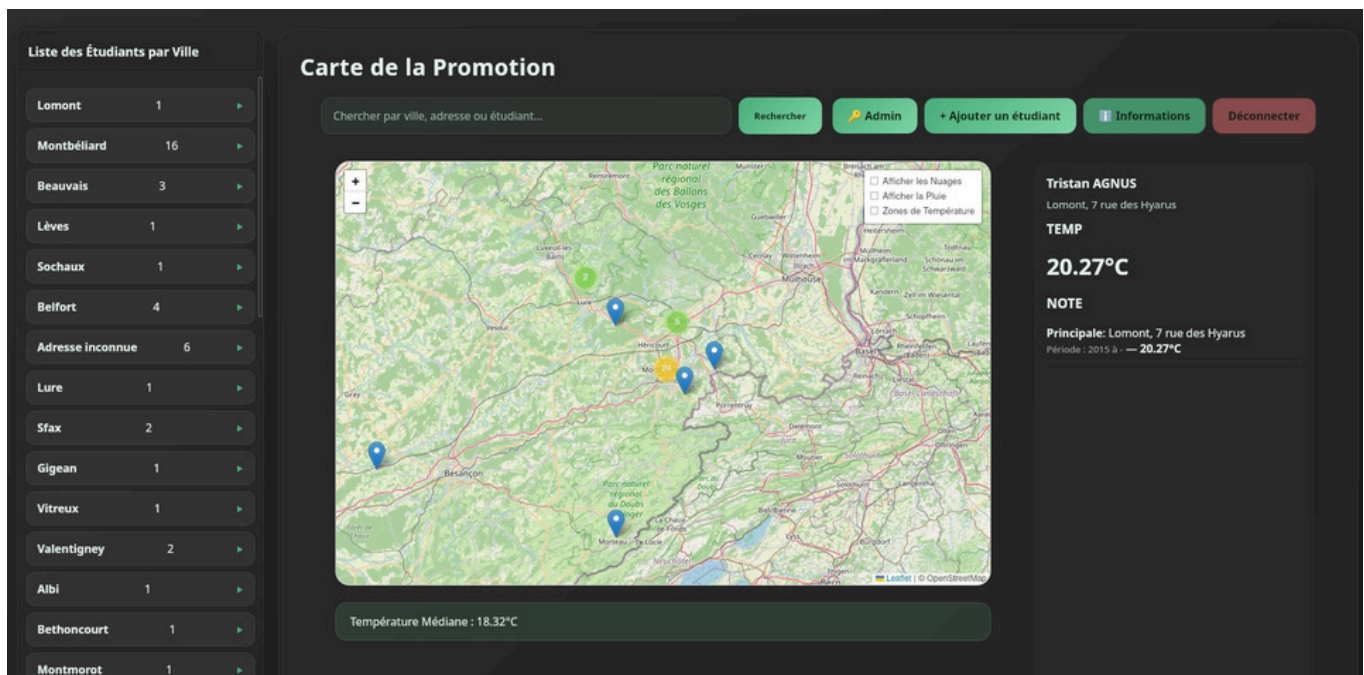

Login: Access via credentials (Email/Username and Password). **Registration:** New account via the dedicated form (First Name, Last Name, City of residence).

2. Map Navigation

The central interface is based on an interactive map that allows visualization of user distribution.

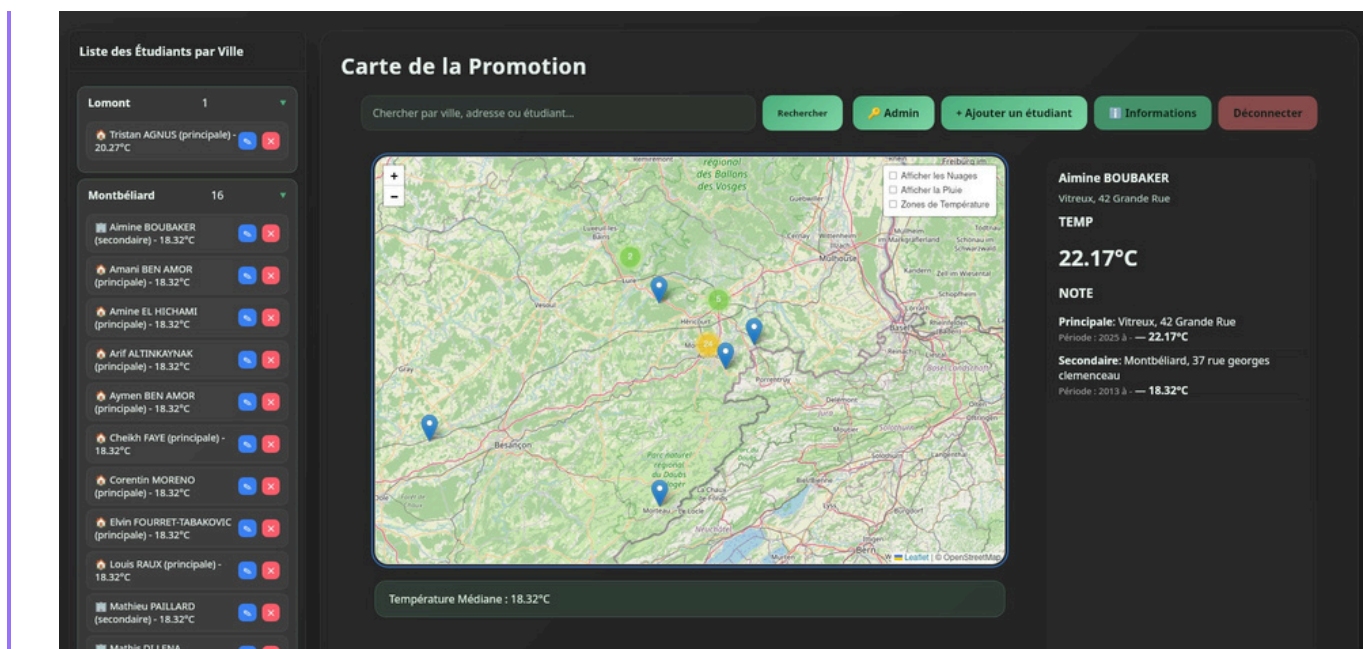

- **Clustering:** Data points automatically group together when zoomed out to maintain map readability.
- **Search Engine:** Toolbar for quickly locating a specific person or city.

3. Data Consultation (Sidebar)

Interacting with the map triggers the display of detailed information in the side panels.

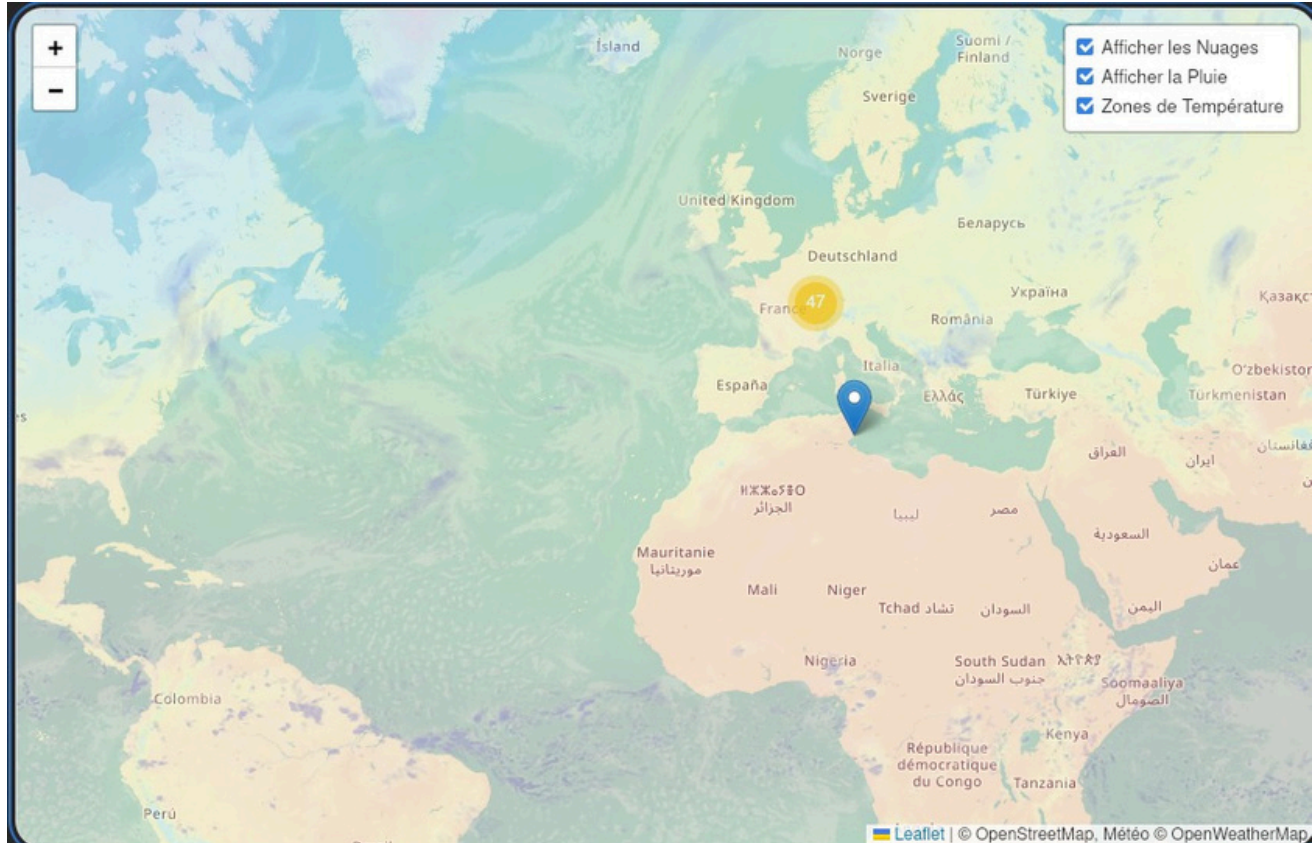

- **Sidebar (Left): Displays saved cities. Click on a filter city.** the corresponding users.
- **Profile Card (Right): Displays the coordinates, seniority, and real-time weather data of the selected user.**

4. Meteorological Analysis (Overlays)

To enhance the visual analysis, data layers can be superimposed on the map:

- **Precipitation: Visualization of rain areas. Cloud**
- **cover: Real-time cloud cover. Temperature:**
- **Global heat map.**

5. Mobile Accessibility and Personalization

The application is fully responsive, guaranteeing an identical experience on desktop and smartphone.

- **Dark Mode: An option available to improve visual comfort depending on lighting conditions.**
- **Session Management: Secure logout via the user menu.**
